The Commonwealth of Massachusetts

OFFICE OF THE SECRETARY, BOSTON, Sept. 27, 1913.

To the Honorable Senate and House of Representatives.

I have the honor to submit herewith, as required by law, the Seventy-first Annual Registration Report, relating to the births, marriages and deaths occurring in Massachusetts and registered in the several cities and towns during the year ending Dec. 31, 1912, and containing also, the reports relating to libels for divorce in the several counties, and the returns of deaths the causes and manner of which have been investigated by the medical examiners during the year 1912.

In tabulating returns of births and deaths stillbirths are not included. The only record of stillbirths appears in Table III.

The nosological arrangement of the tables of deaths in this report is what is known as the International Classification of Causes of Death, adopted by the United States Census Office for the compilation of mortality statistics, and the nomenclature is printed at the end of this report. This subject is further treated in the editorial observations.

The tabulated results are restricted to such as are of practical utility within the meaning of the statute by authority of which the tables are prepared.

The editorial observations were prepared by Thomas F. Greene, M.D.

Very respectfully,

FRANK J. DONAHUE,
Secretary of the Commonwealth.

CONTENTS.

	Page
I. — GENERAL ABSTRACT. — Population State Census of 1910. — Births, Marriages and Deaths registered in each county and town in 1912, distinguishing sex and parentage of Births, nativity of the Married, and sex, nativity, and average age of Decedents,	2
II. — BIRTHS registered in 1912, by counties, by months, and by sex,	18
A. — <i>Supplement</i> . — Plurality Births, by counties, and by sex,	20
B. — <i>Supplement</i> . — Triplet Births by counties and by sex,	20
C. — <i>Supplement</i> . — Births in each city, in group of towns over 5,000 population, and in group of towns under 5,000 population, by sex,	21
III. — STILL-BORN registered in 1912, by counties and by sex,	22
IV. — MARRIAGES registered in 1912, by counties and by months,	24
V. — MARRIAGES registered in 1912, by counties and by age periods,	26

EDITORIAL OBSERVATIONS

BY

THOMAS F. GREENE, M.D.

SEVENTY-FIRST REGISTRATION REPORT.

(1912.)

FOREWORD.

Massachusetts has always shown a keen interest in whatever affects the welfare of her people. This interest manifests itself through wise legislation, efficient administration and careful investigation in relation to health and disease.

Any information or discovery that leads to closer investigation appeals to such of her citizens who have under observation social, physical, commercial or industrial betterment. This progress manifests itself in various ways, through medical science, through better sanitary conditions, affecting the individual, the home and the community, and through better moral conditions.

Yet a report bearing upon the above cannot tell the whole story. Tables of statistics may be compiled, descriptions of a people's condition may be set forth, recommendations as to progress be made, yet these things are all swept aside when one looks into the faces of thousands of people to try to contemplate what may affect their lives.

In submitting observations on the statistics of births, marriages, divorces and deaths for 1912, the writer tried to keep in mind the fact that a study from the figures therein can simply call attention to a condition from which to make comparisons with similar conditions found in previous reports. The nosology (Bertillon System) used in Massachusetts has so standardized statistics that a greater degree of accuracy has been brought about, not alone in preparing State tables, but also in general comparison with those of the United States, other countries, and other States that use the above system.

A careful reading of the more recent tables, both American and foreign, will show a marked similarity not only in the tables, but also in the observations drawn therefrom.

This standardization must prove of great value in comparative investigation of vital statistics, and in the study thereof. Yet there

is always a possibility that such a standardization may become so developed as to be beyond the use of the people for whom it was intended.

The tables used for observations must be standardized more or less from year to year. If marked changes appear to be necessary it might be wise to effect such changes during the year following census enumerations.

POPULATION.

The census of Massachusetts is taken every five years. Upon the accuracy with which this enumeration is made will depend the approximate estimates of the population computed for other years. During the last twenty years the population of the industrial centers of Massachusetts have increased rapidly because of continuous immigration. A goodly number of these people come here from southern Europe and Canada in the spring and work until late in the fall, when they return home. In estimating the population at the present time this condition has come to be an important factor, and must be considered in connection with the natural increase, making it almost impossible to establish any fixed rule for making estimates that will be mathematically accurate.

Possibly the Census Bureau has taken this into consideration, but as the flow of immigration has been to definite centers in the United States, its influence upon the population of the entire country does not so seriously affect the approximates as it does that of Massachusetts.

In order that this matter may be more fully understood, a paragraph from the Census Bulletin 108, page 9, quoted from the registration report of 1911, is herewith repeated:—

The process of estimating the midyear populations for 1900 and 1910 from the census enumerations as of June 1 and April 15, respectively, is very simple. In former estimates, when each census was of date June 1, the interval between them was exactly ten years, or 120 months. The interval between the census of June 1, 1900, and the census of April 15, 1910, is not 120 months, but only 118.5 months. Dividing the observed increase of population for a given area by 118.5, the average monthly increase during the decade is obtained. This monthly increase added to the population June 1, 1900, gives the midyear population for 1900, and two and one-half times the monthly increase added to the population of April 15, 1910, gives the midyear population for 1910. One-tenth of the difference between the midyear populations is then added suc-

cessively for the intercensal years 1900 and 1910, and the postcensal years beginning with 1911. Suitable allowance must, of course, be made for changes of areas.

Table 1. — Calls attention to the population from 1765 to 1910, inclusive, with the numerical increase of each five years from 1776 to 1910, inclusive, and the rates of increase as compared with previous census.

One of the most important facts disclosed is that during one hundred and forty-five years the State of Massachusetts with its limited area has had an increase in its population of 3,126,652. The population of the State in 1855 was 1,132,369. In the fifty-seven succeeding years its population increased 2,234,047.

It may be interesting to know that in 1912 Massachusetts had over 424 people to every square mile of its area.

Table 2. — Refers to population, births, marriages and deaths from 1851 to 1912, with rates and ratio of births to marriages.

This table has been revised several times in regard to its population and its ratios. The method of revision has given fairly accurate data so far as an estimate of the population is concerned, but careful consideration could be given the present method of finding the ratio of births to marriages. It is possible to assume that certain classes of marriages would be followed by births within the following year, yet, while there are no statistics bearing upon this subject, it is reasonable to assume that a considerable number of marriages are not followed by births for two or more years.

If this part of the table is to be continued as an instructive factor in the registration report, some plan might be adopted to register the date of marriage with the birth certificate of the first child.

In completing Table 2 the story for 1912, in so far as the ratios of the population are concerned, is as follows, also that for 1911: —

1.	{	Birth rate of 1,000 population, 1912,	25.48
		Birth rate of 1,000 population, 1911,	25.57
2.	{	Marriage rate, 1912,	8.76
		Marriage rate, 1911,	9.27
3.	{	Persons married, 1912,	17.52
		Persons married, 1911,	18.55
4.	{	Death rate, 1912,	14.85
		Death rate, 1911,	15.36
5.	{	Excess of births over deaths, 1912,	10.62
		Excess of births over deaths, 1911,	10.21

Table 3. — Gives the census population of Massachusetts by counties from 1865 to 1910, and the estimated population from 1905 to 1912, inclusive. Some of the observations found in Table 2 may be applied to Table 3.

Table 4. — Is arranged simply to show the population by sex, with averages for the five census years.

Table 5. — As herewithin arranged is one of the standard tables. It is more than probable that the number of people in evidence to the square kilometer, particularly in Germany and Austria, as well as some of the other European countries, have changed materially since 1900. It was the intention of the writer to revise this table, but a notation at the beginning of the book, with reference to the revision of standard tables until census years, suggested that no change be made.

Table 6. — Calls attention particularly to the death rate and birth rate per 1,000 in the several counties. The death rate in Dukes County, with its population of 4,484, is 21; Norfolk County, with its population of 196,400, shows a death rate of 11.30, while the birth rate in Dukes County is but 16.94, the lowest in the State. Norfolk is second lowest in the State, with a rate of 18.43. The death rate for Suffolk County was but 16.41, and its birth rate, 27.25. It was thought unnecessary to comment upon the death and birth rates of the cities and towns, for a careful examination of the table does not disclose any special information, valuable outside of the particular locality. A marked change, particularly in the death rates of similar communities, depends upon some other causes that may be temporarily local. Again, the populations are so changeable that any definite estimates will hardly serve as a basis for rates or ratios.

BIRTHS.

The State of Massachusetts registered 89,882 living births for the year 1912, a slight increase over 1911, while the number of stillbirths — 3,188 — shows a slight decrease over the previous year, which was 3,280. The birth rates since 1901 show a slight yearly increase numerically as compared with the increase in the population. In 1905 the number of children born alive in the State was 75,022, while the population was 3,015,872. In 1912, with a population of 3,527,974, the number of children born alive was 89,882, making a difference in population of 51,210 against the difference in

the number of births of 14,840. The births and stillbirths for the thirty-one years from 1881 to 1912, together with the ratio of births and stillbirths, can be found in Table 7. This ratio is unusually low as compared with many other States.

Table 7. — Shows the birth rates grouped in five-year periods, from 1881 to 1910, also those of 1911 and 1912.

Table 8. — Shows birth rates from 1851 to 1910, grouped into five-year periods, also the years 1911 and 1912. The birth rate for 1912 is slightly lower than that for 1911. It is undoubtedly difficult to determine what affects the birth rates of the country or State. It is reasonable to suppose that to a certain extent the social or economic conditions may be an important factor. Within recent years several magazine reviews were written with reference to this subject, but apparently excited no special attention outside of certain communities, which, according to the writer, might have been threatened with race suicide. One thing may be said, that the number of children born of foreign parentage far exceeds the number born of native parentage.

Table 9. — The most recent birth rates from foreign countries are apparently more or less crude. Even the corrected rates do not appear reasonably accurate. This condition may be the result of some objective point of view in the different foreign countries, so that the correct comparisons may be made simply with Massachusetts. The birth rates as shown in Table 9 are taken from *Annuaire Statistique de Belgique*, 1903, arranged from a table appearing in a previous report, which appears to be the most correct. The difference between the highest birth rate found in Russia — 46 — and the lowest birth rate found in France — 22 — is 24. Such a difference between two such countries as Russia and France is remarkable, and when we compare the birth rate of Massachusetts, compiled at the same time with these other countries named above, we find Massachusetts ranking next above France, with a birth rate of but 26.

The table, taken as a whole, does not show a very high birth rate for so many important civilized countries, and deserves most serious study.

Table 10. — Calls attention to the rate of natural increase by excess of births over deaths, using the same countries as were used in Table 9. The correctness of the statistics with relation to two or more countries may be questioned. The table as a whole shows

a marked difference in the natural increase of births between the European countries.

In connection with the alarming decline in birth rates of foreign countries, we must look at the excess rate of births over deaths in Massachusetts, with something more than interest. In 1910 this excess was 9.5; in 1911 it was 10.2; in 1912 it was 9.4. In considering the above we should remember that births from foreign parentage are far in excess of those from native parentage. This difference is materially increasing from year to year.

Table 11. — The arrangement of Table 11 shows the natural number of births by counties for forty-three years and the birth rate for the census years. The total number of living births for 1912 was 89,882. This means a gain of 1,555 over the number of living births for 1911. The counties of Berkshire, Hampden, Middlesex, Hampshire, Plymouth, Suffolk and Worcester showed a slight gain over the number of living births registered for 1911; all of the other counties showed a decrease for the year 1912 over 1911.

Table 12. — Gives the number of births by sex and ratio of males to females for the years 1910, 1911 and 1912. The excess of male births for 1912 is slightly in excess of those of 1910-11. This excess was prevalent not only in Massachusetts and the United States, but will be found in all of the statistical tables bearing upon such matters in all of the European countries.

In the same table it will be seen that the ratio of males to females among the stillborn for 1910, 1911 and 1912 shows a marked excess of males. The rate of males was 144.8 in 1910; 129.6 in 1911; 145.6 in 1912.

Table 13. — In Table 13 the parentage of children born alive in the several counties of Massachusetts during the year 1912 is considered; figures relating to plural births are also given. The 28,424 children born of native parentage is in marked contrast with the 45,861 born of foreign parentage, — a difference of 17,437 in favor of children born of foreign parentage.

The counties in the State that show an excess of children born of native parentage are Barnstable, Berkshire, Franklin, Nantucket and Plymouth, while the counties of Bristol, Essex, Middlesex, Suffolk and Worcester show a marked increase in the number of children born of foreign parentage.

The following may be of interest, showing the native-born and foreign-born parentage of children for three years, 1907, 1911, 1912:—

	1907.	1911.	1912.
Both parents native-born, . . .	26,561	27,390	28,424
Both parents foreign-born, . . .	43,004	45,741	45,861
Totals,	69,565	73,131	74,285

Table 14.—Shows the percentages of native and foreign living births from 1900 to 1912, inclusive. While the percentage of native-born births is a slight increase over 1911, there is a slight decrease in the percentage of foreign births. The percentage of children of native-born parents is the highest since 1905, while the percentage of foreign-born living births is slightly below that of 1910–11.

Table 15.—Beginning with 1885 this table shows the number of births for every fifth year, namely, 1890, 1895, 1900 and 1905, and each succeeding year. An examination of this table will disclose conditions that were spoken of under a previous table.

MARRIAGES.

Table 17.—There were 30,898 registered marriages in Massachusetts in 1912, which was 1,153 less than those registered in 1911. The number of persons married for each 1,000 of the estimated population was 17.52, and the number of marriages to each 1,000 was 8.76, being the lowest since 1908.

Table 18.—Gives the number of marriages in each county for a period of eleven years, from 1902 to 1912, inclusive; it also shows the marriage rates for the census years 1885, 1890, 1895, 1900, 1905 and 1910.

Table 21.—Gives the different ages of men and women, to the number of 30,898, who were married in 1912. The number of married women under twenty years of age, 5,446, is in marked contrast with the number of married men of same age, 775.

The second part of the table calls attention to the ages of 27,707 bachelors and 28,368 maids. The greater number of marriages occurred between twenty and thirty years of age.

There were 3,191 widowers and 2,530 widows married during the year 1912. Of this number, 7 widows were under twenty years of age and 15 were seventy or over. There were 64 widowers between twenty and twenty-five, and 71 widowers seventy or over who married, 24 being seventy-five and over, including 4 over eighty.

Table 22. — Gives the number of persons married who were less than twenty years of age. This was 17.5 per cent. of the whole number of women married in 1912 and 2.5 per cent. of the total number of men married in 1912.

DIVORCES.

The total number of divorces granted in Massachusetts for 1912 was 1,926, and the total number of marriages, 30,898. This represents one divorce to every 16 marriages. The tendency in Massachusetts is toward a greater number of divorces in comparison with the marriages as will be seen in Table 24. The ratio is slightly less than 1911. Whatever may be the cause of this increase it must be viewed with alarm.

In 1890 there was 1 divorce to every 31 marriages.

In 1895 there was 1 divorce to every 24 marriages.

In 1900 there was 1 divorce to every 19 marriages.

In 1905 there was 1 divorce to every 17 marriages.

In 1910 there was 1 divorce to every 15 marriages.

That is to say in twenty years the ratio of divorces to marriages has risen from 1 to 31 to 1 to 16, the record of 1911 being the very highest known in the history of the State.

The specific causes for which divorces may be granted in Massachusetts, as set forth in the statute, are practically the same as have existed for the last twenty-five years, so that the causes for the increased ratio of divorces must be looked for either in the attitude of society toward the sacredness of the marriage contract or in the present influences that surround the married life and social condition.

Table 24. — In Table 24 the rates found of the total number of divorces granted in the ten years from 1903 to 1912 are set forth.

Table 25. — In Table 25 will be found the statistics relating to the marriages and divorces for the year 1912, according to counties.

The number for each county as specified, and the marked differences in the ratios of divorces to marriages for the several counties, may attract special attention.

In nearly 75 per cent. of the whole number of divorces granted in the twenty years the wife was the complainant.

Table 26. — Shows the ratio of the total number of divorces to the total number of marriages by counties from the five principal causes for twenty-one years.

There were 5,223 divorces granted for adultery, which is a ratio of 1 to 105; for desertion, 14,218, or 1 to 38; for intoxication, 3,972, or a ratio of 1 to 137; extreme cruelty, 764, or 1 to 716; cruel and abusive treatment, 5,282, or a ratio of 1 to 103.

Table 27. — Gives the population, marriages and total number of divorces and the ratio of divorces to marriages for 1895, 1900, 1905, 1910, 1911 and 1912. There is a marked difference in the ratio of divorces to marriages when we compare those of 1895 — 1 to 24 — with those of 1910, — 1 to 15.

Table 28. — Shows the number of divorces in New England as compared with the similar number of other States for the years 1890 and 1900.

Table 29. — Shows, as arranged, the difference in divorces granted in other countries, as compared with the United States.

DEATHS.

In 1912 the total number of deaths for the year as reported was 52,400, which was 2,007 less than in 1910 and 662 less than 1911. The death rate for the year was 14.85 per thousand of the living population, the very lowest death rate yet obtained. This death rate being in a non-census year is based upon the estimated number of the population, but it is reasonably accurate, as may be shown by comparing the rate with those of the quinquennial period, dating back to 1896.

Table 30. — Is arranged to show the number of deaths and the death rates for the quinquennial period beginning 1851.

Table 31. — Shows the deaths and death rates by counties for the census years 1865 to 1910, with 1911 and 1912. The State as a whole shows a decrease in the number of deaths with the exception of a few counties.

Table 32. — Shows the relation of the mortality rate to the months of the year for 1910, 1911 and 1912. The greatest difference will be found between the month of March, with a death rate of 5,062, and the month of June, with a death rate of 3,719, or a difference of 1,343. In 1911 the same condition appears, the number of deaths in March being 5,086, and in June 3,517, or a difference of 1,569.

Table 33. — In Table 33 are given the area, population and number of deaths and death rates for each county for 1912, arranged according to the death rate. This may have no value other than as a reference for the year, as the order found in Table 33 materially changes from year to year.

Table 34. — Shows the mortality of males and females from 1860 to 1912, with the ratio of mortality of males to that of females and the mortality rate of each sex. An important fact in this table is that the number of male deaths has exceeded those of the females since 1888. In 1912 the ratio was slightly lower than in 1910 and 1911.

Table 35. — Shows the deaths at different ages, by sex, for the years 1910, 1911 and 1912. The excess of deaths of males over females under one year of age for the year 1912 was 1,238; under five years, 1,417; from twenty to thirty years, 73; and in all others, 164 males.

Table 36. — Presents the ratio of deaths at certain ages for eighteen years, beginning with 1895. The percentage of deaths between twenty and thirty was the lowest in any year for the last twenty-five years, and possibly the lowest in the history of the State.

The number of deaths under one year of age in 1912 was 10,472. This is the record since 1904.

CAUSES OF DEATH.

Table 39. — Shows the mortality from six communicable diseases for a period of ten years.

During the year 1912 there were registered 52,400 deaths, which was a decrease of 662 over the number of 53,062 in 1911.

The marked decrease in the number of deaths from such diseases as typhoid fever, whooping cough, diphtheria and croup, and scarlet fever may be noted by a comparison of the number of cases in 1903 with 1912.

	1903.	1912.
Typhoid fever,	527	269
Whooping cough,	519	225
Diphtheria and croup,	869	473
Scarlet fever,	510	118
Smallpox,	22	1

This marked decrease is the more satisfactory when we consider the rapid increase in our population. Such communicable diseases are likely to attack the crowded centers, but because of excellent hospital service in such places it has been possible to reduce the mortality materially. In fact, the treatment of the above diseases has effectually minimized their dangerous effects in crowded centers.

Table 40. — Shows, under fourteen headings, the causes of death, with the percentages per 1,000 population for the State and for the counties.

The causes of death by classes for the year 1912 show a reduction in the number of deaths over 1910 and 1911 with but three exceptions.

The number of deaths reported under diseases of the circulatory apparatus registered 1,659 more deaths than in 1910, and 1,557 more than in 1911.

This condition is largely due to the marked increase in the number of deaths from organic diseases of the heart.

An examination of the statistics on causes of death by classes for 1910, 1911 and 1912, on page 182, may be interesting.

Table 41. — Presents some statistics of deaths produced by external causes for ten years, 1903 to 1912, inclusive.

The constant increase in the number of deaths by accidental injuries is due to the more extended use of motor power on the highways of the State.

In ten years the number of deaths from this cause has increased over 40 per cent.

The total number of deaths from external causes shows a gradual increase from 1903 to 1912, with the exception of 1909.

In 1911 the number of deaths — 614 — as registered in the report, exceeded by over 300 the total number for the other nine years of

the period 1903 to 1912. Had there been a normal number of deaths from heat in 1911, the record for 1912 would have been the highest for twenty years.

Table 42. — Shows deaths from specific causes for the year 1912. In this table the number of deaths from pulmonary consumption and pneumonia stand out prominently. The steady decrease in the number of deaths from tuberculosis is due mainly to treatment in early stages of the disease.

This is especially true in the children, due to the advancement of the physical education in our public schools.

Table 43. — Shows the mortality from measles for a period of fifty-two years.

Table 44. — Shows the mortality from scarlet fever, by counties, for 1910, 1911 and 1912. This table shows a steady decrease in the total number of cases: 1910, 254; 1911, 184; 1912, 118.

Table 45. — Shows the mortality from scarlet fever from 1861 to 1912. The number of deaths for 1912 was the lowest during all this period except 1905, when there were registered 117 deaths.

Table 46. — Shows the number of deaths from diphtheria and croup, by counties, for 1910, 1911 and 1912.

This table also shows a decrease in the number of deaths in 1912 over 1910 and 1911.

Table 47. — Gives the mortality from diphtheria and croup for fifty-two years from 1861 to 1912. The number of deaths as shown in this table with the rates deserves special attention.

The death rate for 1880 was 13.5 per 10,000 living people; in 1890 it was 7.3 per 10,000 living people; in 1910 it was 2.01 per 10,000 living people. Comparing the number of deaths the greatest number as registered for this period is under 1876, the number being 3,294. The smallest number is registered under 1912, being 473. The highest rate was preceding the use of antitoxin.

Table 48. — Shows the deaths from typhoid fever, by counties, from 1903 to 1912.

Table 49. — Shows the mortality for the State for fifty-two years from typhoid fever.

The steady decrease in the number of deaths as well as in the death rates per 10,000 living people needs no comment.

Table 50. — Gives the mortality from pulmonary consumption, by months and quarters, for 1912, and also the percentages for the quarters.

Table 51. — Gives the mortality from pulmonary consumption, by counties, for 1910, 1911 and 1912.

Table 52. — Gives the mortality from pulmonary consumption for forty years, 1873 to 1912, inclusive.

The steady decrease in the death rate for this disease is a tribute to the efficiency of the State and to her institutional treatment. The careful consideration given to such cases by physicians and their methods of treatment have also contributed largely to the decrease.

Table 53. — Shows the mortality from lobar pneumonia, by months and quarters, with percentages, for the year 1912.

Table 54. — Shows the mortality from smallpox for sixty-two years, from 1851 to 1912, inclusive.

Table 55. — Shows the mortality from cancer for census years 1875 to 1910, also the years 1911 and 1912, with the death rates per 10,000 living population. The number of deaths with the rate must be viewed with some alarm, showing as they do the increase in the number of deaths from year to year.

Some encouragement is to be found in the greater efforts that are being made to discover the causes of the disease, as well as a remedy to prevent the growing number of deaths from cancer.

Table 56. — Gives the mortality from bright's disease, nephritis, kidney diseases and from dropsy for the census years beginning with 1895, also the years 1911 and 1912, with the deaths from these causes and the total mortality per 1,000.

The steady increase in the number of deaths from kidney diseases is also exciting much interest in the medical profession.

Table 57. — Registers the deaths from alcoholism during the census years 1875 to 1910, and also for 1911 and 1912.

Table 58. — Shows the infant mortality rates per 1,000 births in the counties for 1911 and 1912. It is unnecessary to comment upon this table.

Table 59. — Gives the number of deaths from suicide, by months and quarters, with percentages.

The greatest number of deaths from suicide were registered in October and November, each 47. The lowest was registered in February and was 32.

Table 60. — Shows the mortality, by months, from suicide, for the years 1910, 1911 and 1912.

In 1910 the highest monthly mortality was in the month of July, and the lowest was in February. In 1911 the highest mortality was in May, and the lowest was in July.

This table may be of interest to psychologists who may have the impression that the greatest mortality from suicides occurs in April, May and June.

MEDICAL EXAMINERS' RETURNS.

The statistics covering the duties of medical examiners for the State of Massachusetts may be so interpreted as to afford the greatest possible power.

The exercise of this power by the examiners as State officials is so little understood that with few exceptions a minimum of importance is attached to this position. Yet the returns of medical examiners, both as to views and autopsies for the last ten years, show a marked increase in the number of their investigations.

In 1903 there were registered 3,010 views and 283 autopsies, while the registered reports for 1912 show 6,151 views and 730 autopsies; 11.9 per cent. of the investigations made by medical examiners in 1912 necessitated autopsies.

A careful examination of the medical examiners' tables, to be found in this book, will disclose influences that are very effective both as an aid to medical progress and as an important factor in criminal investigation.

Table 61. — Presents views and autopsies during ten years, 1903 to 1912, for the State and by counties.

SYNOPSIS OF TABLES.

POPULATION.

1. Population of Massachusetts.
2. Births, Marriages and Deaths, with Ratios.
3. Census Population by Counties.
4. Population by Sex and Age Periods, 1865-1910.
5. Density of European Countries compared with Massachusetts.
6. Estimated Population of Massachusetts, with Death and Birth Rates for Each County.

BIRTHS.

7. Births and Stillbirths in Massachusetts, 1881-1912.
8. Birth Rates, 1851-1912.
9. Foreign Birth Rates compared with Massachusetts.
10. Rate of Increase by Excess of Births over Deaths.
11. Birth Rates in Census Years, by Counties, 1870-1912.
12. Births — Ratio of Males to Females, 1910-12.

13. Parentage of Children born alive in Massachusetts, by Counties, 1912.
14. Percentage of Native and Foreign Living Births, 1900-12.
15. Births during Years 1885-1912, by Sex.
16. Plural Births, 1895-1912.

MARRIAGES.

17. Marriage Rates, 1851-1912.
18. Marriages by Counties and Persons Married to 1,000 Living.
19. Marriages and Percentages, by Months, 1910-12.
20. Marriages given Quarterly for Eight Years, 1905-12.
21. Ages of 30,898 Men and 30,898 Women at Marriage in 1912.
22. Persons Married who were less than Twenty Years Old, 1912.
23. Conjugal Condition of Persons Married, 1912.

DIVORCES.

24. Ratio of Divorces to Marriages, 1903-12.
25. Ratio of Divorces to Marriages, by Counties, for 1912.
26. Ratio of Total Number of Divorces to Total Number of Marriages from Five Principal Causes, 1892-1912.
27. Divorces granted, 1895-1912.
28. Divorces per 100,000 Married Population in the New England States as compared with Some Other States.
29. Divorces per 100,000 Population in the United States and Some Other Nations.

DEATHS.

30. Deaths and Death Rates, 1851-1912.
31. Death Rates by Counties for Census Years 1865-1910, and for 1911-12, and Deaths by Counties for 1910-12.
32. Relation of Mortality Rate to Months of Years 1910-12.
33. Showing Area, Population, Number of Deaths and Death Rates of Counties, 1912.
34. Mortality of Males and Females compared, 1860-1912.
35. Deaths at Different Ages, 1910-12.
36. Deaths at Different Ages. — Percentages. — Eighteen Years, 1895-1912.
37. Infant Mortality. — Eighteen Years, 1895-1912.
38. Infantile Mortality. — Deaths of Children under One Year to 1,000 Births, 1881-1909.
39. Mortality from Six Communicable Diseases for Ten Years, 1903-12.
40. Causes of Death by Classes and Counties, 1912.
- 40A. Causes of Death by Classes for State, 1910-12.
41. Deaths produced by External Causes. — Ten Years, 1903-12.
42. Number of Deaths from Specific Causes, 1912.
43. Mortality from Measles. — Fifty-two Years, 1861-1912.
44. Mortality from Scarlet Fever, by Counties, 1910-12.
45. Mortality from Scarlet Fever, 1861-1912.
46. Mortality from Diphtheria and Croup, by Counties, 1910-12.
47. Mortality from Diphtheria and Croup. — Fifty-two Years, 1861-1912.
48. Mortality from Typhoid Fever, by Counties, 1903-12.
49. Mortality from Typhoid Fever. — Fifty-two Years, 1861-1912.
50. Mortality from Pulmonary Consumption, by Months and Quarters, 1912.
51. Mortality from Pulmonary Consumption, by Counties, 1910-12.
52. Mortality from Pulmonary Consumption. — Forty Years, 1873-1912.
53. Mortality from Lobar Pneumonia, by Months and Quarters, 1912.
54. Mortality from Smallpox for Sixty-two Years, 1851-1912.
55. Mortality from Cancer for Years 1875-1912.
56. Mortality from Bright's Disease, Nephritis, Other Kidney Diseases and Dropsy, 1895-1912.

57. Deaths from Alcoholism, 1875-1912.

58. Massachusetts Infant Mortality Rates per 1,000 Births for Counties, 1911-12.

59. Mortality from Suicide, by Months, 1912.

60. Mortality from Suicide by Months for the Years 1910-12.

61. Views and Autopsies for Ten Years, 1903-12.

TABLE 1. — *Population of Massachusetts and Annual Rates of Increase, 1765-1910, compiled from Colonial, United States and State Census Reports.*¹

YEARS AND CENSUS.	Population.	Increase.	Annual Rate of Increase.	Rate of Increase as compared with Previous Census.
1765 (Prov.), ²	239,764	—	—	—
1776 (Prov.), ³	299,841	60,077	2.16 per cent. ⁴	25.1

¹ Census of Massachusetts, Part 2, Vol. I.

² Includes 1,569 Indians, distributed by counties as follows: Barnstable, 515 (of which 230 were in Mashpee); Berkshire, 221 (in Stockbridge); Bristol, 167 (principally in Dartmouth and Freetown); Dukes, 313 (of which 188 were in Chilmark); Middlesex, 37 (in Natick); Nantucket, 93; Plymouth, 223.

³ Includes 4,761 colored population, distributed by counties as follows: Barnstable, 171; Berkshire, 216; Bristol, 585; Dukes, 59; Essex, 1,049; Franklin, Hampden and Hampshire (one county), 245; Middlesex, 702; Nantucket, 133; Plymouth, 457; Norfolk and Suffolk (one county), 682; Worcester, 432.

⁴ This percentage does not include in the population 1,569 Indians.

⁵ This percentage does not include in the population 4,761 colored.

TABLE 2. — *Births, Marriages and Deaths, with the Population and Rates and Ratio of Births to Marriages, 1851-1912 (Stillbirths excluded).*

YEARS.	Population.	Births.	Marriages.	Deaths.	Excess of Births over Deaths.	Births to 1,000 Persons.	Persons Married to 1,000.	Deaths to 1,000 Persons.	Excess Rate of Births over Deaths.	Ratio of Births to Marriages.
1851.	1,020,674	28,661	11,966	18,934	9,727	28.08	23.44	18.55	9.53	2.77
1852.	1,047,518	29,892	11,578	18,482	11,320	28.45	22.11	17.64	10.81	2.50
1853.	1,075,083	30,920	12,828	20,301	10,619	28.76	23.86	18.88	9.88	2.67
1854.	1,103,341	31,997	13,683	21,414	10,583	29.01	24.80	19.40	9.59	2.49
1855.	1,132,369	32,845	12,329	20,798	12,047	29.00	21.06	18.37	10.64	2.40
1856.	1,151,455	34,445	12,265	20,734	13,711	29.91	21.30	18.00	11.90	2.79
1857.	1,170,855	35,320	11,739	21,280	14,040	30.17	20.05	18.17	11.99	2.88
1858.	1,190,583	34,491	10,527	20,776	13,715	28.97	17.68	17.45	11.52	2.94
1859.	1,210,645	35,442	11,475	20,976	14,466	29.28	18.96	17.33	11.95	3.36
1860.	1,231,066	36,051	12,404	23,068	12,983	29.28	20.15	18.74	10.55	3.14
1861.	1,238,176	35,445	10,972	24,085	11,360	28.63	17.72	19.45	9.17	2.86
1862.	1,245,326	32,275	11,014	22,974	9,301	25.92	17.68	18.45	7.47	2.94

INTERNATIONAL CLASSIFICATION OF CAUSES OF DEATH.

[Second Decennial Revision, Paris, July 1-3, 1909.]

[This revised international classification of causes of death was designed for use during the present decade. The next revision will be made in 1919 for use in the twenties. The causes of death as given below number 189, compared with 179 in the old classification.]

I. GENERAL DISEASES.

1. Typhoid fever.
2. Typhus fever.
3. Relapsing fever.
4. Malaria.
5. Smallpox.
6. Measles.
7. Scarlet fever.
8. Whooping cough.
9. Diphtheria and croup.
10. Influenza.
11. Miliary fever.
12. Asiatic cholera.
13. Cholera nostras.
14. Dysentery.
15. Plague.
16. Yellow fever.
17. Leprosy.
18. Erysipelas.
19. Other epidemic diseases.
20. Purulent infection and septicæmia.
21. Glanders.
22. Anthrax.
23. Rabies.
24. Tetanus.
25. Mycoses.
26. Pellagra.
27. Beriberi.
28. Tuberculosis of the lungs.
29. Acute miliary tuberculosis.
30. Tuberculous meningitis.
31. Abdominal tuberculosis.
32. Pott's disease.
33. White swellings.
34. Tuberculosis of other organs.
35. Disseminated tuberculosis.
36. Rickets.
37. Syphilis.
38. Gonococcus infection.
39. Cancer of the buccal cavity.
40. Cancer of the stomach, liver.
41. Cancer of the peritoneum, intestines and rectum.
42. Cancer of the female genital organs.
43. Cancer of the breast.

I. GENERAL DISEASES — *Con.*

44. Cancer of the skin.
45. Cancer of other organs or of organs not specified.
46. Other tumors (tumors of the female genital organs excepted).
47. Acute articular rheumatism.
48. Chronic rheumatism and gout.
49. Scurvy.
50. Diabetes.
51. Exophthalmic goiter.
52. Addison's disease.
53. Leuchæmia.
54. Anæmia, chlorosis.
55. Other general diseases.
56. Alcoholism (acute or chronic).
57. Chronic lead poisoning.
58. Other chronic occupation poisonings.
59. Other chronic poisonings.

II. DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.

60. Encephalitis.
61. Meningitis.
 - (a) Simple meningitis.
 - (b) Cerebro-spinal meningitis (undefined).
 - (c) Cerebro-spinal fever.
62. Locomotor ataxia.
63. Other diseases of the spinal cord.
 - (a) Acute anterior poliomyelitis.
 - (b) Other diseases of the spinal cord.
64. Cerebral hemorrhage, apoplexy.
65. Softening of the brain.
66. Paralysis without specified cause.
67. General paralysis of the insane.
68. Other forms of mental alienation.
69. Epilepsy.
70. Convulsions (non-puerperal).
71. Convulsions of infants.
72. Chorea.
73. Neuralgia and neuritis.
74. Other diseases of the nervous system.
75. Diseases of the eyes and their adnexa.
76. Diseases of the ears.

International Classification of Causes of Death—Continued.

III. DISEASES OF THE CIRCULATORY SYSTEM.

- 77. Pericarditis.
- 78. Acute endocarditis.
- 79. Organic diseases of the heart.
- 80. Angina pectoris.
- 81. Diseases of the arteries, atheroma, aneurysm, etc.
- 82. Embolism and thrombosis.
- 83. Diseases of the veins (varices, hemorrhoids, phlebitis, etc.).
- 84. Diseases of the lymphatic system (lymphangitis, etc.).
- 85. Hemorrhage and other diseases of the circulatory system.

IV. DISEASES OF THE RESPIRATORY SYSTEM.

- 86. Diseases of the nasal fossæ.
- 87. Diseases of the larynx.
- 88. Diseases of the thyroid body.
- 89. Acute bronchitis.
- 90. Chronic bronchitis.
- 91. Broncho-pneumonia.
- 92. Pneumonia.
 - (a) Lobar pneumonia.
 - (b) Pneumonia (undefined).
- 93. Pleurisy.
- 94. Pulmonary congestion, pulmonary apoplexy.
- 95. Gangrene of the lung.
- 96. Asthma.
- 97. Pulmonary emphysema.
- 98. Other diseases of the respiratory system (tuberculosis excepted).

V. DISEASES OF THE DIGESTIVE SYSTEM.

- 99. Diseases of the mouth and adnexa.
- 100. Diseases of the pharynx.
- 101. Diseases of the œsophagus.
- 102. Ulcer of the stomach.
- 103. Other diseases of the stomach (cancer excepted).
- 104. Diarrhœa and enteritis (under two years).
- 105. Diarrhœa and enteritis (two years and over).
- 106. Ankylostomiasis.
- 107. Intestinal parasites.
- 108. Appendicitis and typhilitis.
- 109. Hernia and intestinal obstruction.
 - (a) Hernia.
 - (b) Intestinal obstruction.
- 110. Other diseases of the intestines.
- 111. Acute yellow atrophy of the liver.
- 112. Hydatid tumor of the liver.
- 113. Cirrhosis of the liver.
- 114. Biliary calculi.
- 115. Other diseases of the liver.
- 116. Diseases of the spleen.
- 117. Simple peritonitis (non-puerperal).
- 118. Other diseases of the digestive system (cancer and tuberculosis excepted).

VI. NON-VENEREAL DISEASES OF THE GENITO-URINARY SYSTEM AND ADNEXA.

- 119. Acute nephritis.
- 120. Bright's disease.
- 121. Chyluria.
- 122. Other diseases of the kidneys and adnexa.
- 123. Calculi of the urinary passages.
- 124. Diseases of the bladder.
- 125. Diseases of the urethra, urinary abscess, etc.
- 126. Diseases of the prostate.
- 127. Non-veneral diseases of the male genital organs.
- 128. Uterine hemorrhage (non-puerperal).
- 129. Uterine tumor (non-cancerous).
- 130. Other diseases of the uterus.
- 131. Cysts and other tumors of the ovary.
- 132. Salpingitis and other diseases of the female genital organs.
- 133. Non-puerperal diseases of the breast (cancer excepted).

VII. THE PUERPERAL STATE.

- 134. Accidents of pregnancy.
- 135. Puerperal hemorrhage.
- 136. Other accidents of labor.
- 137. Puerperal septicæmia.
- 138. Puerperal albuminuria and convulsions.
- 139. Puerperal phlegmasia alba dolens, embolus, sudden death.
- 140. Following childbirth (not otherwise defined).
- 141. Puerperal diseases of the breast.

VIII. DISEASES OF THE SKIN AND OF THE CELLULAR TISSUE.

- 142. Gangrene.
- 143. Furuncle.
- 144. Acute abscess.
- 145. Other diseases of the skin and adnexa.

IX. DISEASES OF THE BONES AND OF THE ORGANS OF LOCOMOTION.

- 146. Diseases of the bones (tuberculosis excepted).
- 147. Diseases of the joints (tuberculosis and rheumatism excepted).
- 148. Amputations.
- 149. Other diseases of the organs of locomotion.

X. MALFORMATIONS.

- 150. Congenital malformations (stillbirths not included).
 - (a) Hydrocephalus.
 - (b) Congenital malformations of the heart.
 - (c) Other congenital malformations.

International Classification of Causes of Death—Concluded.

XI. EARLY INFANCY.

151. Congenital debility, icterus and sclerema.
 - (a) Premature birth.
 - (b) Congenital debility, "atrophy," "marasmus," etc.
152. Other causes peculiar to early infancy.
 - (a) Injuries at birth.
 - (b) Other causes peculiar to early infancy.
153. Lack of care.

XII. OLD AGE.

154. Senility.

XIII. EXTERNAL CAUSES.

155. Suicide by poison.
156. Suicide by asphyxia.
157. Suicide by hanging or strangulation.
158. Suicide by drowning.
159. Suicide by firearms.
160. Suicide by cutting or piercing instruments.
161. Suicide by jumping from high places.
162. Suicide by crushing.
163. Other suicides.
164. Poisoning by food.
165. Other acute poisonings.
166. Conflagrations.
167. Burns (conflagration excepted).
168. Absorption of deleterious gases (conflagration excepted).
169. Accidental drowning.
170. Traumatism by firearms.

XIII. EXTERNAL CAUSES — *Con.*

171. Traumatism by cutting or piercing instruments.
172. Traumatism by fall.
173. Traumatism in mines and quarries.
 - (a) Traumatism in mines.
 - (b) Traumatism in quarries.
174. Traumatism by machines.
175. Traumatism by other crushing.
 - (a) Railroad accidents and injuries.
 - (b) Street car accidents and injuries.
 - (c) Automobile accidents and injuries.
 - (d) Injuries by other vehicles.
 - (e) Landslide and other crushing.
176. Injuries by animals.
177. Starvation.
178. Excessive cold.
179. Effects of heat.
180. Lightning.
181. Electricity (lightning excepted).
182. Homicide by firearms.
183. Homicide by cutting or piercing instrument.
184. Homicide by other means.
185. Fractures (cause not specified).
186. Other external violence.

XIV. ILL-DEFINED DISEASES.

187. Ill-defined organic disease.
188. Sudden death.
189. Not specified or ill-defined.
 - (a) Ill-defined.
 - (b) Not specified or unknown.
